2019

Nurturing student-led technology in the  
developing world to break  
the innovation gap.

Developh is a nonprofit and community that empowers the youth to  
innovate for the world. We work to make computer science and technology  
more equitable and support student ventures through a pre-seed accelerator.

## Issue

Technology has given us the potential to create groundbreaking innovations from our bedrooms, but this isn't a reality for the youth in developing nations.

Despite high digital consumption and presence, the technology market lacks skill and representation.

**These divides in representation and technical skill only further the innovation gap in the technology sector.**

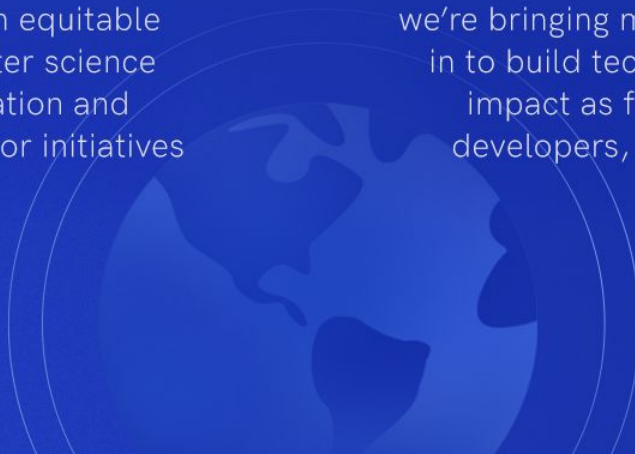

# Developh

From “develop”  
& “Philippines”

is refactoring the tech pipeline for the underserved youth in  
the Philippines and beyond.

Through equitable  
computer science  
education and  
accelerator initiatives

we’re bringing more students  
in to build tech for social  
impact as founders,  
developers, designers

The background of the slide is a blue-tinted photograph of a group of diverse students smiling and posing. Some students are wearing lanyards. In the background, there are logos for 'Devo Soc' and 'Devo Soc'.

DEVELOPH BELIEVES THAT...

Every student  
deserves to be a  
part of coding the  
future.

## RESHAPING THE TECH SCENE.

Developh is an international nonprofit working to make technology more equitable across the developing world.

Since 2016, we've run education & accelerator initiatives to shape student founders. We uplift and upskill students to build things that leave a lasting impact.

Founded in a classroom of 40 in Muntinlupa, now having impacted 60,000+ students.

*Formerly Developers' Society*

MAKING COMPUTER SCIENCE FOR ALL

## EDUCATION

We run workshops, school visits, and outreaches with youth around the nation where students teach students.

Manned by our member chapters and curricula, we introduce the foundations of digital literacy, tech, design, and more. Students can opt into intensives and explore project-building through our innovation program.

Youth leave with the groundwork - and most importantly community - they need to succeed in tech.

MAKING TECHNOLOGY BUILT BY ALL

## INNOVATION

Empowering the youth to develop, and growing the student founder community. We run an accelerator on the basis of technology for social good.

Students enter their own venture ideas at any stage, or sign up to work with tech-enabled projects partnered with NGOs. We assist with mentorship, spaces, capital - while students can focus on learning, building, and impacting without sacrificing their schooling.

**Developh**

## Community

We run the largest open tech community and coalition of computing, creative, and entrepreneurial high school and college organizations.

From here, we scout talent, run surveys to create reports on the scene, offer ticket and conference opportunities, and work to host workshops and events (from mixers, coffee chats, to intersectional conferences) to build the creator community.

Our mentor network and company partners help expose our community to career opportunities.

Nathan Villegas (nathan@developh.org)  
**VP of Community**

## Technology.ph

Technology.ph (at that domain) is our official digital publication looking to spread real technology movements forward. Primarily run by student contributors, we publish event coverage, startup insights and reports, op-eds on tech culture, and share work from local communities.

## Programs

Learn about some of the programs we run to make our education and innovation programs work.

We're constantly working on our model as we scale, diversify, and learn.

## DevEd & Education

Our outreaches (weekends or summer) introduce high school-aged and above students to technology through digital literacy, programming and design, and entrepreneurial lessons. Students come out having built a project.

We work on materials at our open-source education initiative called DevEd. Our chapters across the world through our Community program help with materials, and identifying new places for us to visit, and sustain work with through our innovation program.

## Ventures

Developh Ventures is our official stage-agnostic accelerator. We're aiming to build the most student-friendly incubator for disruptive, socially impactful ideas by the youth.

We also run collaborations with NGOs to build products and help further missions that matter through technology.

# Tour

**We're going  
on tour!**

**Targeting  
2,500 students  
directly impacted**

**At least 7 stops  
outside of Metro Manila**

**From May  
to August**

**Our tour aims to empower the youth with technology, helping them build projects that target issues around them and explore technology as a career path.**

The Philippines with its digital literacy, strong online engagement, and English-speaking population is a perfect target to teach concrete technology skills to bring the youth into the tech pipeline.

We partner with NGOs, teachers, and community leaders to find places to visit. On our visits, our student volunteers host workshops and talks introducing design thinking, programming, and the arts. We pitch, have talks, share ideas, and think about the community around us. Our goal is to establish a connection with a student/faculty member to help facilitate continued engagement after visits to accelerate any projects and build on the youth's technical skills.

**SUPPORT US**

**Join us in our efforts of making  
computer science a reality  
for millions.**

GRACE HOPPER If you're interested in what we do, reach out to us at [hello@developh.org](mailto:hello@developh.org) or to any of our student executive members to see what we can do.

Recognized by AnitaB.org, Microsoft, We Are Family Foundation, and more - we work with schools, NGOs, local government units, and other bodies to spread tech and make the world a more open, accessible, and creative space.

**ABIE  
AWARDS**

# Thank you!

Although we've been in operation since 2016, the more we grow and the bigger we dream - the clearer it becomes that we can't do this alone. Thank you for supporting us and joining us in our vision of making the world more equitable and accessible for people to be a part of technology.
