developh.org

Developh

Nurturing student-led technology in the
developing world to break
the innovation gap.

Developh is a nonprofit and community that empowers the youth to
innovate for the world. We work to make computer science and technology
more equitable and support student ventures through a pre-seed accelerator.

Issue

Technology has given us the potential to create groundbreaking innovations from our bedrooms, but this isn't a reality for the youth in developing nations.

〜〜〜

Despite high digital consumption and presence, the technology market lacks skill and representation.

These divides in representation and technical skill only further the innovation gap in the technology sector.

Developh

From "develop" & "Philippines"

is refactoring the tech pipeline for the underserved youth in the Philippines and beyond.

Through equitable computer science education and accelerator initiatives

we're bringing more students in to build tech for social impact as founders, developers, designers

DEVELOPH BELIEVES THAT...

Every student deserves to be a part of coding the future.

RESHAPING THE TECH SCENE.

Developh is an international nonprofit working to make technology more equitable and representative across the developing world.

Since 2016, we champion opportunities and initiatives that invest in the youth and their work in tech. We focus on tangible, impact-oriented work.

Founded in a classroom of 40 in Muntinlupa, now having impacted 60,000+ students.
Formerly Developers' Society

EDUCATION

We connect with communities to expose students to technology and give them the technical introduction and support to pursue programming, design, and business. Our chapters program and open-source curriculum called "DevEd" support this.

INITIATIVES FOR EQUITABLE TECHNOLOGY AND CS EDUCATION

INNOVATION

Supporting ventures from ideation to launch, we provide funding, networks, custom workshops, and our impact platform to support students working on ventures. Our Fellowship program welcomes in original ideas or NGO-partnered mission-based work.

FUNDING & GUIDED MENTORSHIP FOR STUDENT VENTURES

Developh

DevEd

Student-created education initiative with workshops, educational shorts, modules, and tutorials open to use, access, and contribute to.

Build

Innovation initiative that brings students together to work on mission-based projects, working in real dev environments to launch amazing things.

Intern

Connects students to companies for tech-related work over the summer. Throughout the way, we guide students in refining their CV, interviewing, and more.

Conf

Connects students to companies for tech-related work over the summer. Throughout the way, we guide students in refining their CV, interviewing, and more.

We work on education and incubation programs that work across the tech pipeline from exposure to career.

Our programs are run by students, oriented towards using technology for social good.

Tour

We're going on tour!

Targeting 2,500 students directly impacted

At least 7 stops outside of Metro Manila

From May to August

Our tour aims to empower the youth with technology, helping them build projects that target issues around them and explore technology as a career path.

The Philippines with its digital literacy, strong online engagement, and English-speaking population is a perfect target to teach concrete technology skills to bring the youth into the tech pipeline.

We partner with NGOs, teachers, and community leaders to find places to visit. On our visits, our student volunteers host workshops and talks introducing design thinking, programming, and the arts. We pitch, have talks, share ideas, and think about the community around us. Our goal is to establish a connection with a student/faculty member to help facilitate continued engagement after visits to accelerate any projects and build on the youth's technical skills.

SUPPORT US

Join us in our efforts of making computer science a reality for millions.

If you're interested in what we do, reach out to us at hello@developh.org or to any of our student executive members to see what we can do.

Recognized by AnitaB.org, Microsoft, We Are Family Foundation, and more - we work with schools, NGOs, local government units, and other bodies to spread tech and make the world a more open, accessible, and creative space.

Thank you!

Although we've been in operation since 2016, the more we grow and the bigger we dream - the clearer it becomes that we can't do this alone. Thank you for supporting us and joining us in our vision of making the world more equitable and accessible for people to be a part of technology.
